

FONDINOX S.p.A.

26010 SERGNANO (CR) Italy - Via Marconi, 42/48

Phone: +39 0373 45651 - Fax: +39 0373 455100

website: www.fondinox.com

e-mail: fondinox@fondinox.com

Sales offices all around Europe; contact us to get the closest to You.

Stainless steels and nickel base alloys

METALLURGICAL EXPERIENCE

Products: STATIC CASTINGS

Extreme care and knowledge upon metallurgy and melting process, together with a profitable cooperation between our technicians and customers lead us to the production of tailored castings with the best performances and quality level. Our moulding system, with the use of organic non carburizing binders, prevents any reaction between sand mould and casting surface in order to guarantee the maximum corrosion resistance.

■ A QUALITY GUARANTEE

A wide experience in the field of corrosion resistant alloys. Foundry and metallurgical know how, particularly with regards to the more stringent corrosive working conditions of components. Collaboration with several research laboratories and institutes. Long history based on continuous partnership, collaboration and technical assistance of the most important special alloys producers like Outokumpu Oy, Sandvik Steel AB Sweden and Haynes Intl. lead us to the production of alloys under original licence.

■ APPLICATION FIELDS

Offshore and onshore extraction of oil and natural gas.
Petrochemical and chemical industry.
Thermal and nuclear power stations.
Valve and pump industry.
Sea water desalination.
Mining and metallurgical industry.
Desulfurization plants.
Dairy industries.
Military industries.
Shipbuilding.

■ DIMENSIONAL CAPACITIES

Static castings with net weight ranging from 0,5 to 6000 kgs.

■ 1966

Company was founded by the same ownership as today.

■ 1972

Company decided to be specialized in the sand foundry activity. Production of cast nickel base alloys was initiated.

■ 1981

Centicast items production.

■ 1984

Production of licenced patented alloys.

■ 2004

A new facility for machining with the name GM Inox S.r.l. has been established.

■ 2012

More than 45 years of experience at our customer full service.

A LIQUID FORGING PROCESS

Products: CENTRICAST PIECES

Material cleanliness due to centrifugation separation of inclusions, very fine microstructure due to rapid cooling of liquid metal in metallic mould, total freedom on analysis choice and a very rapid process cycle give an extremely competitive product with outstanding mechanical, creep and corrosion resistance behaviour.

CENTRIFUGALLY CAST TUBES

Tubes are supplied heat treated in as cast condition, partially or fully machined.

APPLICATIONS

Corrosion resistant alloys

Mechanical line pipes in chemical plants and offshore platforms. Conveyors rolls in pulp and paper, dairy, textile, printing industries, central and lateral bodies for HP ball valves, rings, nozzles, seats.

Multistage pumps bodies, seals, collectors, line pipes for nuclear power stations, cryogenics, industrial gases production.

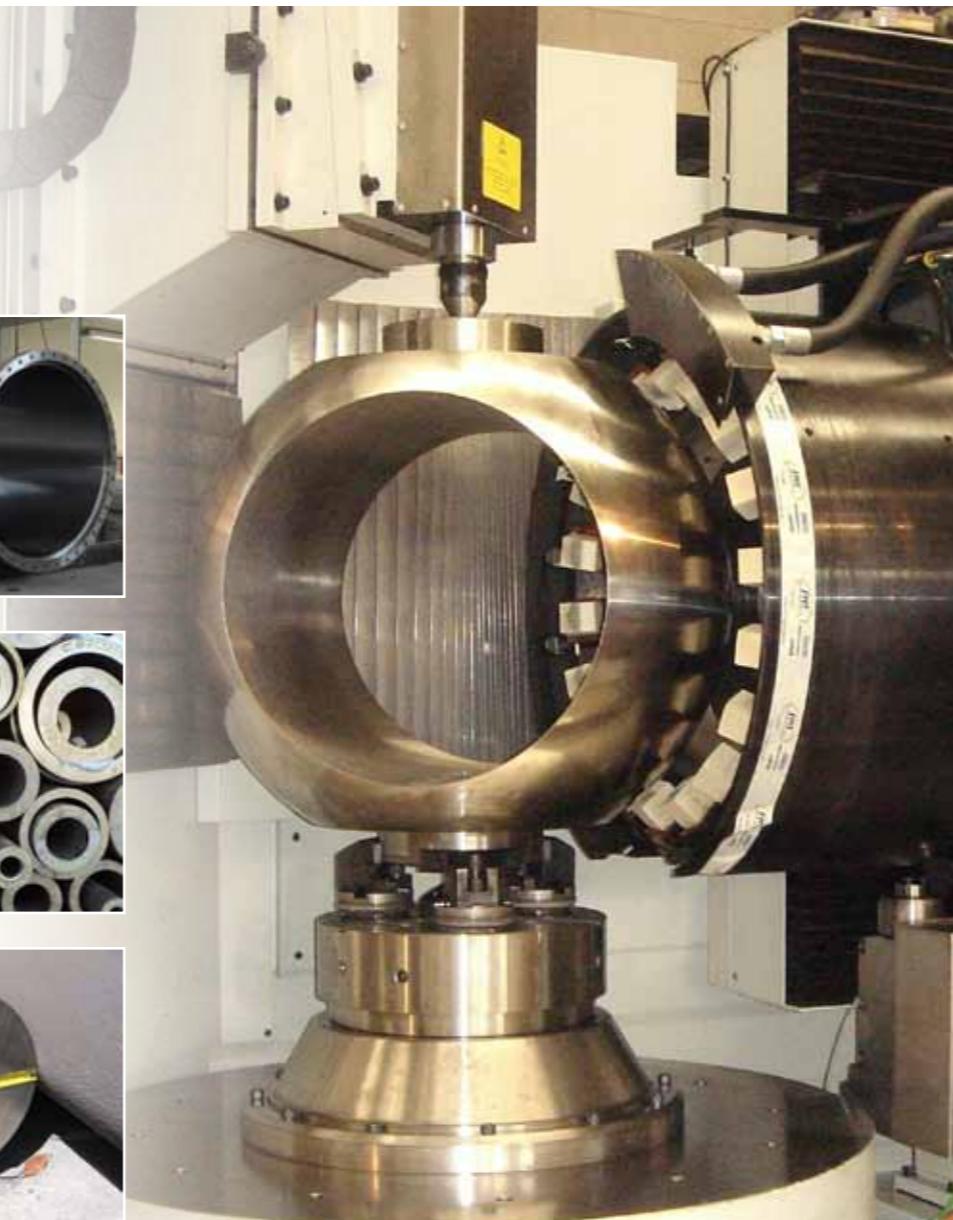

High temperature alloys

Radiant tubes, roll conveyors for metallurgical industry, muffles, retorts, line pipes and fittings for petrochemistry.

DIMENSIONAL CAPACITIES

Outside diameter from 80 to 1500 mm.
Inside diameter higher than 45 mm.
Unitary lengths up to 5500 mm.
Wall thickness from 10 up to 150 mm.
Total production capacity: 2000 tons/year.

CENTRICAST VERTICAL ITEMS

Production of axialsimmetric items very near to final shape without weight and material loss, rough or fully finished machined.

APPLICATIONS

Corrosion resistant alloys

Balls and flanged bodies for HP ball valves, seat rings, flanged bushes, shaped rings. Conical parts for centrifuges (rotors, bowl shells), valve cages, hydraulic turbine seal and wear rings, high pressure filter housings.

High temperature alloys

Conical parts for roll conveyors, gas turbine components, components for petrochemistry (tees, manifolds, line pipes).

DIMENSIONAL CAPACITIES

Outside diameter from 300 to 1400 mm.
Inside diameter higher than 140 mm.
Lengths up to 880 mm.
Wall thickness up to 250 mm.
Balls from 6" to 32", also with trunnions.
Total production capacity: 1000 tons/year.

ASSEMBLED COMPONENTS

Pieces manufactured with different technologies (sand castings, centrifugal castings) can be weld assembled obtaining a wide range of products.

FACILITIES AT CUSTOMER FULL SERVICE

- Castings optimization with a continuous cooperation between our technicians and customers designers and with the help of our 3D drawing software together with pouring and solidification process simulation software Magma®.

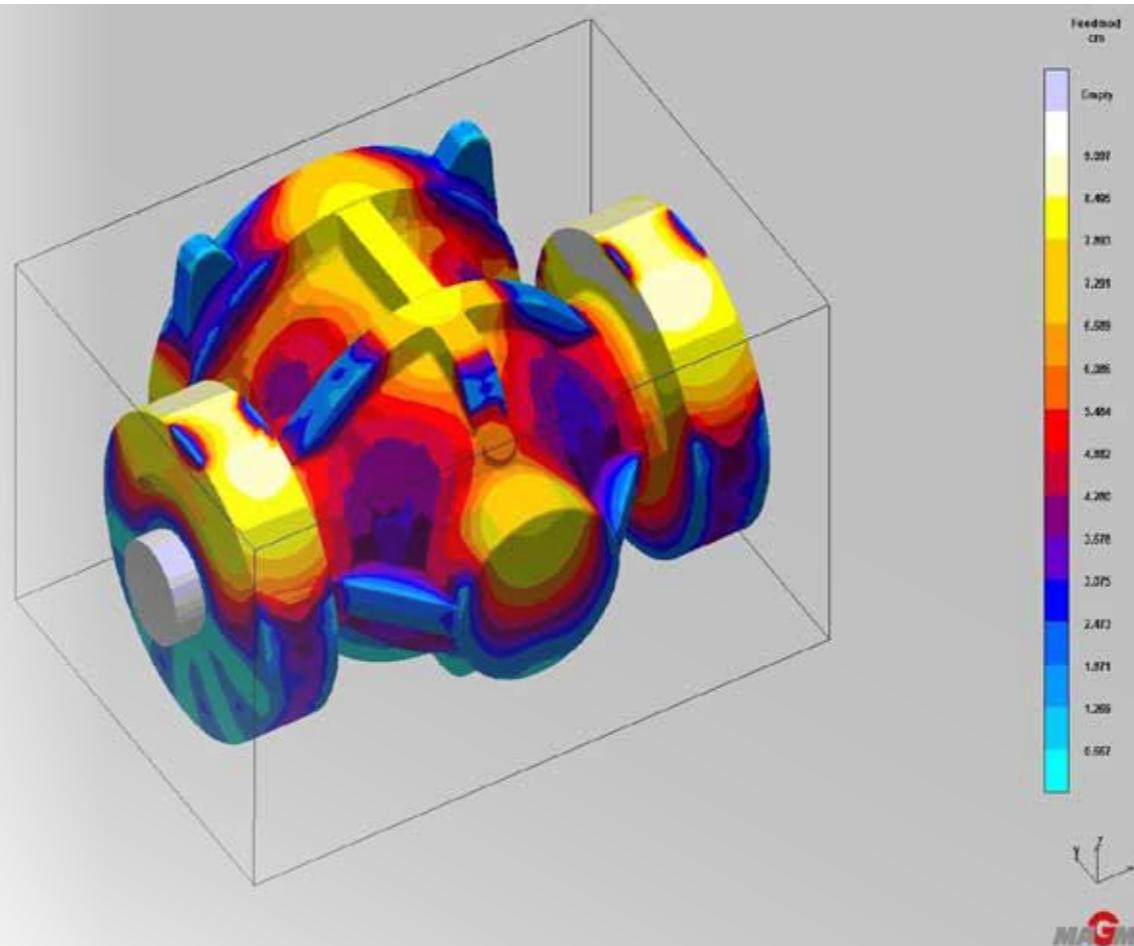

- Pattern store on an area of 3000 sqm where our customer patterns are safely stored and mapped.

- Fully equipped patternmaker shop, located nearby our premises can manufacture new patterns in the shortest time.

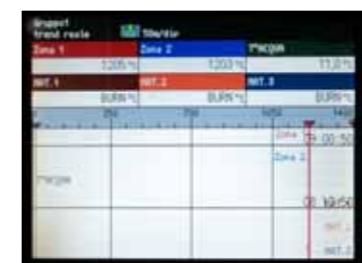

- Moulding shop is equipped with manual, semiautomatic and automatic moulding systems for dimensions up to 3000x5000 mm and net weights from 0.5 to 6000 kg/piece.

- Fondinox machining shop GM Inox is equipped with:
 - 8 CNC lathes.
 - 4 CNC machining centres.
 - 6 lathes for heavy premachining.
 - Workable diameter up to 1400 mm and lengths up to 8000 mm.
 - ISO 9001/2008 and OHSAS 18001:2007 qualified.

- Three heat treatment furnaces with working zone sizes up to 3200x2600x5000 mm and pools up to 250 cubic meters equipped with water recirculation units for rapid cooling of castings.

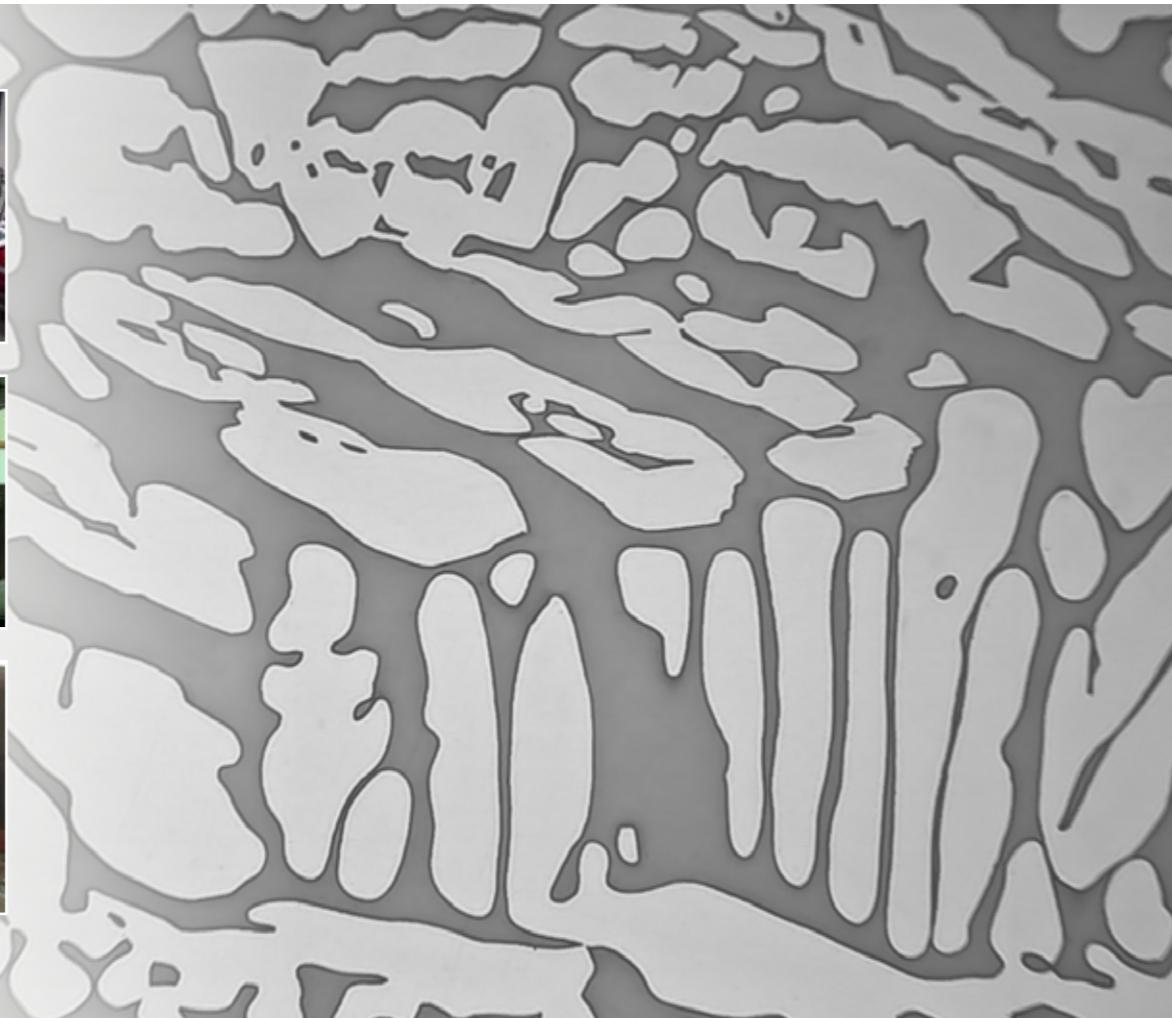

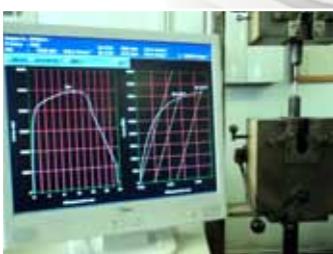

- Melting shop equipped with ten induction furnaces ranging from 300 to 3500 kgs. We can ensure the best flexibility and care on all our heats. Pouring under controlled atmosphere, argon refinement in furnace and ladle.

- Centricast shop equipped with four horizontal machines and four vertical machines to cover a wide production range af centricast items.

MATERIAL TESTING

- Internal laboratory equipped to perform chemical analysis, mechanical tests, corrosion tests (intercrystalline, pitting, crevice, SSCC, SCC, accelerated corrosion) , microstructure analysis with optical microscopy and SEM. R&D Department for continuous improvement of cast alloys.

- PT carried out in dedicated area with controlled humidity, temperature and light intensity conditions.

- Fondinox S.p.A. is qualified according to ISO 9001 since 1996
TÜV AD 2000 W0
Lloyd's Register approval for naval applications
NORSOK qualifications for superaustenitic, duplex and superduplex, Inconel and Hastelloy alloys for cast thickness up to 250mm.
NDE personnel qualified according SNT-TC-1A/EN473 for PT, VT, RT.

- VT performed on the entire production by our trained and highly skilled operators.

- Dimensional control performed on all patterns and castings avoiding tolerance problems on products.

- Subcontracted RT shop working under exclusive agreement equipped with 6 bunkers and 2 linear accelerators up to 6 MeV.
